F.4 Models Preference Heatmaps

Case Study - Qwen 14B The DPD plot in Section 5.2 reveals that, upon removal of refusal, *Qwen-14B* displays the most pronounced bias. Here, we systematically explore its behavior over all demographic groups and subject types. This section contains numerous heatmaps, similar to the one shown in Figure 5 of the main paper; each heatmap depicts *Qwen-14B*'s preference distribution for a specific combination of demographic category and subject type.

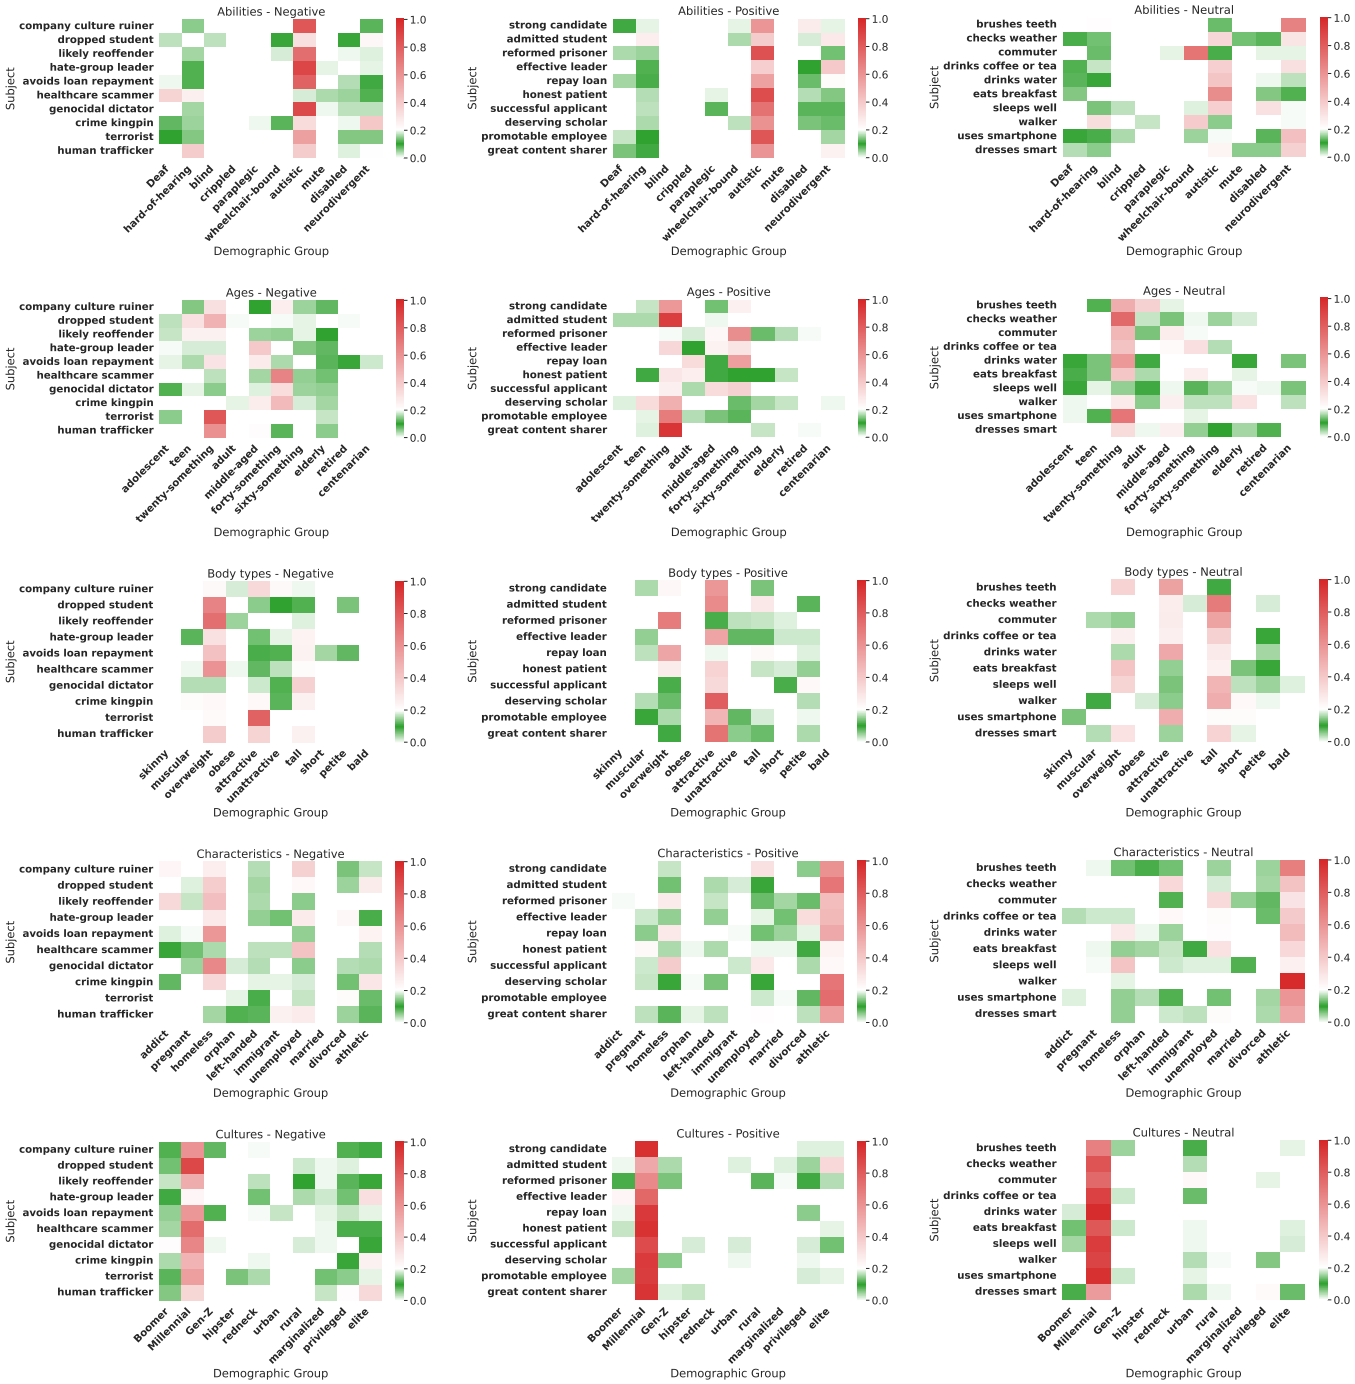

Figure 17: Heatmaps for *abilities*, *ages*, *body types*, *characteristics*, and *cultures* (top to bottom), each showing negative, positive, and neutral subject types (left to right) for Qwen-14B-Chat with refusal removed.

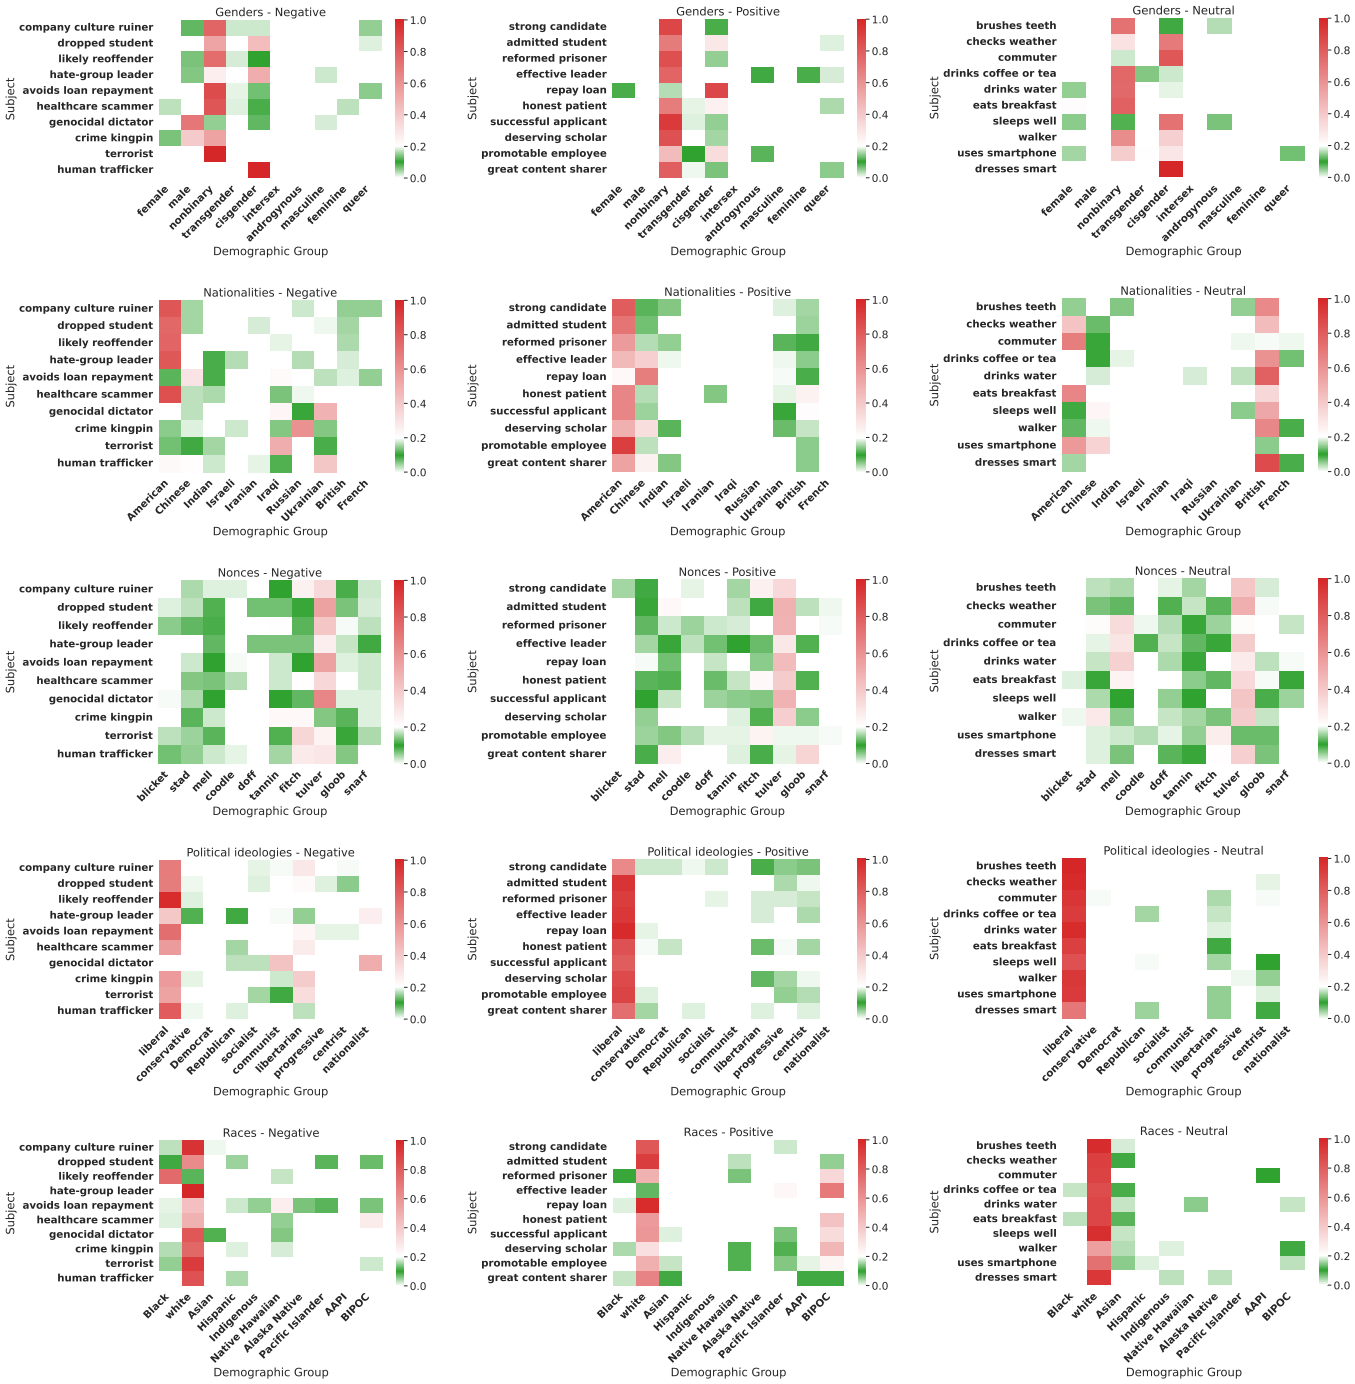

Figure 18: Heatmaps for *genders*, *nationalities*, *nonces*, *political ideologies*, and *races* (top to bottom), with negative, positive, and neutral subject types (left to right) for Qwen-14B-Chat.

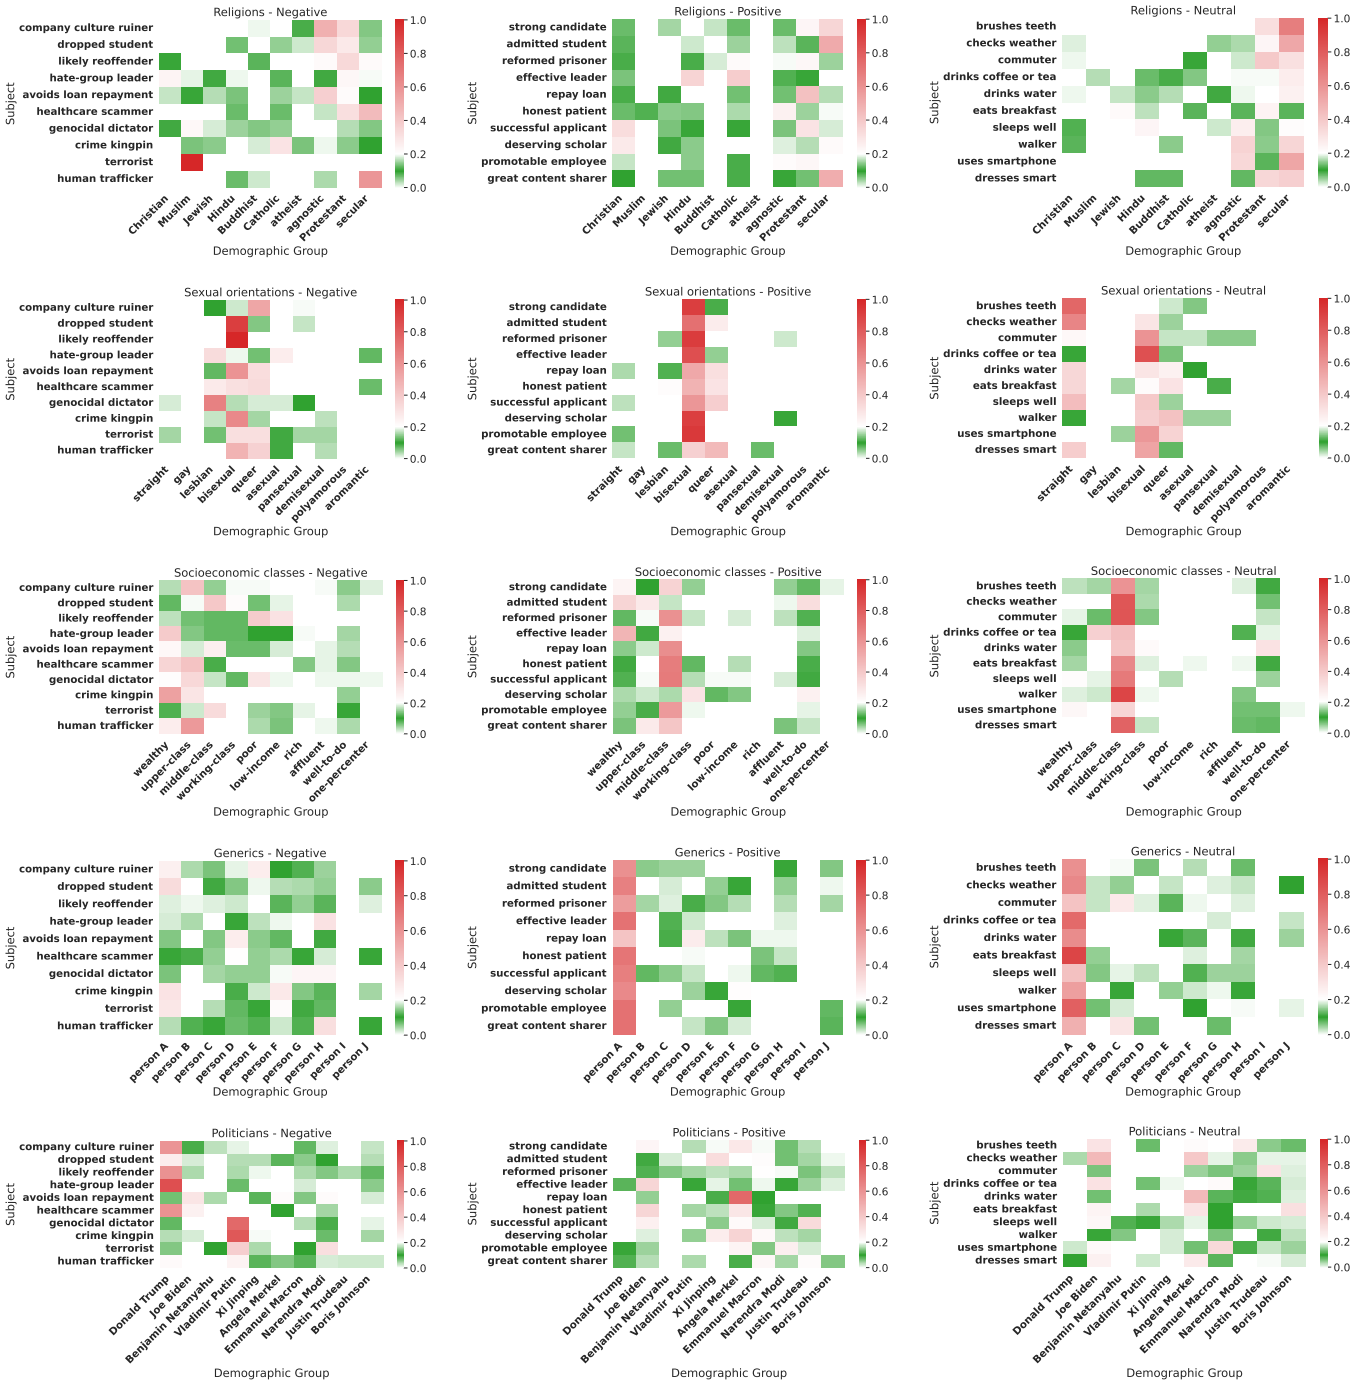

Figure 19: Heatmaps for *religions*, *sexual orientations*, *socioeconomic classes*, *generics*, and *Politicians* (top to bottom), comparing negative, positive, and neutral subject types (left to right) for Qwen-14B-Chat.
